

4-12 Contract Documents

Contract Documents consist of complete sets of project plans and special provisions as printed to advertise and construct a project.

For projects advertised by Caltrans, the Structures Specifications unit will distribute Contract Documents to Caltrans functional units as necessary. The OSFP Liaison Engineer usually will receive six sets from the distribution, two of which will be sent to the prime structures design consultant for their use.

Contract Documents for projects not advertised by Caltrans shall be submitted to the OSFP Liaison Engineer by the consultant. Plan sets submitted shall be reduced sized. Additional plan sets and special provisions may be required for projects that include miscellaneous structures and other types of special work. The Liaison Engineer will determine the actual number of sets required and will make the distribution to Caltrans functional units as necessary.
